

Drive Through - Order Prepared in Advance

I'm on the way to a client site and want a specialty cup of coffee to keep me alert during the long drive. I have a very special order and there isn't time to park, go in, wait, etc. so I want to drive through, but I also want to get my coffee prepared my special way.

I get my order on the screen (see *Order Prepared in Advance*, an earlier example), I pull into Starbucks™, say "Scan Please" to have the scanner activated. They scan it. I drive forward, they hand me the coffee and I move on down the road.

The single QR-c contained the details of my order as well as the charge authorization. When I got the coffee the charge had already be submitted and approved.

Think of the speed improvements!!
